SUMMARY

Experienced fullstack engineer, passionate about architecting and developing scalable, accessible, and maintainable projects. My experience centers around the TypeScript, React and Node.js stack, where I excel in crafting robust solutions. However, my enthusiasm and passion for the industry drives me to continuously explore and adopt new technologies.

EXPERIENCE

Senior Software Engineer

Fremtind Forsikring AS

December 2022 - Present, Oslo, Norway

- I was entrusted with the architecture, day-to-day development and maintenance of the frontends of Fremtinds business market applications. Since the fall of 2023, I have been given the opportunity to take the lead on a new project, developing a ecommerce solution, that makes it possible for Fremtinds customers to purchase insurance online. The project is still ongoing, and is being built using TypeScript and Next.js (14) for the frontend, and Java with Quarkus for the API layer. The static data is being stored in Sanity for easy editing for non-technical roles.
- I was responsible for the onboarding, mentorship and development of a newly graduated engineer. My role as a senior engineer was expanded to include bi-monthly check-ins, creating a progression plan for them and helping them in their day to day tasks.
- I have had great fun and learned a lot by being responsible for the engineers in Fremtinds summer internship programme. Over the course of 7 weeks, I oversaw the development of a project assigned to the interns, and helped their learning by hosting workshops about accessibility, best practices, security and system design. The internship programme was a remarkable success and the interns all left great reviews, citing my leadership as one of the highlights.
- I am involved with different initiatives at Fremtind, to help out with employer branding, and the wellbeing of developers at Fremtind. I am in a group organising hackathons for developers, as well as having the responsibility for creating stands to be used at conferences and job-fairs at universities.

Developer

Dekode Interaktiv AS

September 2020 - December 2022, Oslo, Norway

- Started as an developer trainee in a 12 month program, that had to be cut short after five months due to my progression and accomplishments.
- I had the opportunity to work with some of Norways largest NGO's, creating bespoke solutions on top of WordPress, using PHP for templating, and JavaScript with React for creating interactive editor blocks for the website editors.
- In the fall of 2021 I transferred to a specialist team, tasked with creating a design system without a design, which consisted of a block library that can be easily tweaked with CSS to fit the design needs of any new Dekode project.
- Created internal tooling for bootstrapping of WordPress blocks, where I created a CLI that automated a manual process that used to take up to 20 minutes, down to around 30 seconds, saving the engineering team hundreds of hours over the span of a year.

Senior Javascript Engineer

Google LLC /10up inc

June 2022 - November 2022, Remote

- I was headhunted to work on Google Site Kit, Google's official, open-source WordPress plugin, due to my strong combination of JavaScript and PHP experience, specialising in React and WordPress development.
- My day-to-day consisted of writing implementation briefs, solving tickets, doing code reviews, as well as collaborating in the design doc process for new features.
- The role got me familiarised with working with a distributed team, by collaborating with engineers, project managers and quality assurance in places ranging from Michigan, to Seoul.

EDUCATION

Digital Marketing

Noroff School of Technology and Digital Media · 2019

SKILLS

TypeScript, JavaScript, PHP, SQL, Node.js, Next.js, CMS, Tailwind, A11Y, Github Actions, test driven development, React, performance, security
